

Won Its' way into Semi-Final!

Date: November 3rd, 2011

Storming Robots high school team has gained its way into the Semi-Final - 3D Simulation of Satellite Autonomous Control. We ranked 35 out of 149 competitive teams from the United States, and Europe. Only 54 teams are selected to enter the Semi-Final.

There will be another round in early December, in order to enter the Final. At the Final, competitors will test their programs controlling a satellite on the International Space Station, with an astronaut as the referee. As one student put it, "The cool factor is insane!".

Among other winning teams we know of, they all have 15 to 20 members in the team. Thus, design, programming, mathematics work, and testing are all divided among members. However, we have only 5 members in the team handling all these work. That says a lot about the high quality of our team of 5!
