

THE ENGINEERING PROCESS

Before you start to create a Smart Robot, there is a process you should follow to maximize the success of your project with minimum development time.

Implementation :

- Should ALWAYS have a design first.
- For software, such as flowcharts and/or pseudo-code, algorithms modeling.
- For hardware, such as Computer Aided Modeling, Drafting or Sketching.

Design Prototype :

- Can be a hardware device or software
- Simple model for proof of concept
